Divya Baheti

Software Engineer at FIS

Pune, Maharashtra, India

Summary

Proficient in developing and maintaining software products for Windows and web-based applications within the Banking Finance industry using Agile Methodology like SCRUM, with a specialized knowledge of IB - Post Trade Services.

Committed to staying up-to-date with the latest developments in decentralized applications and technologies, with a focus on their potential for transforming industries.

Experience

FIS

6 years 8 months

Software Engineer - FISCD

August 2022 - Present (3 years 7 months)

Pune, Maharashtra, India

- Created a Web Application that is specifically used by LME (London Metal Exchange) to make trades in FISCD system to further process it.
- Designed & developed various Components like a combination of Dropdown, Text and Date, using Angular Material, and many more.
- Created and styled the form, so that a user can enter trades as fast as possible, as this is time sensitive application.
- Changing the content of Form, based on the inputs and pre-defined conditions.
- Integrated form data with other screens and data from backend, fetched using Rest API calls and services.
- Integrated company's defined standards into form.
- Developed unit test cases for Components.
- Created and implemented various directives like translate, using i18n.
- Implemented functionality to upload file for bulk upload of trades.
- Collaborated with UX team to improve the overall look and feel of the application by implementing various cosmetic changes such as font styles, sizes, color schemes, and other visual design elements.

Software Engineer - Futures Connect (FC)

July 2019 - Present (6 years 8 months)

Pune, Maharashtra, India

- Supervised on various Tech Debt tasks like Migrating Windows servers from 2008 to 2016 servers, Migrating Oracle servers from 11g to 18c.
- Developing a CI/CD pipeline using Team City and Nexus
- Merged various solutions of application into 1 for better maintainence and development.
- Developed various features that can enable actions from UI, to ease the tasks of users and making app less vulnerable to Human errors, with proper auditing of actions taken.
- Implemented functionality to verify and generate the checksum of files for data authentication and validity.
- Authenticating user via key based mechanism instead of password based, to protect from unauthorized use, using WINSXP.
- Code changes and implementations of various functionalities to adhere to various exchanges standard
- Partnered with cross-functional teams to identify, debug, troubleshoot and resolve over 50 production issues within strict deadlines, ensuring seamless operations for critical business processes.

Education

MIT College of Engineering, Pune

Bachelor's Degree, Computer Engineering · (2015 - 2019)
